NetWare • Windows • OS/2 • Unix • Macintosh

User's Printing Guide

This guide covers the procedures needed to set up your workstation for printing through the AXIS 540/640 network print server, once it has been properly installed. If you need further assistance, please ask your Network Administrator or refer to the AXIS 540/640 User's Manual, or the AXIS 540/640 Quick Installation Guide.

AXIS 540/640 makes printing easier

The AXIS 540/542 and AXIS 640/642 are stand alone network print servers for Ethernet and Token Ring environments respectively. Using the AXIS 540/640 makes it possible to connect your printers anywhere in the network, giving all users access to shared printer resources.

The AXIS 540/640 plugs directly in to your printer and makes it appear as a normal printer when printing from your workstation. Your Network Administrator will have given this printer a name during the installation of the AXIS 540/640. You will need this name when making your printer selection.

Fast and easy to use

You will find that printing via the AXIS 540/640 is very fast due to its rapid data throughput of up to 390 kbytes per second. Also high speed Centronics communication, such as Hewlett-Packard Fast Mode, is supported.

The AXIS 540/640 is extremely user friendly, because of its powerful built in features. It can communicate with all the major computer systems and network protocols. These different protocols can be handled simultaneously making the AXIS 540/640 the ideal print server solution for a mixed environment.

Unix

Choose the print instruction appropriate to your type of system:

BSD systems: `lpr -P<printer name> <file name>`

System V systems: `pr -d<printer name> <file name>`

AIX systems: `qprt -P<printer name> <file name>`

Your Network Administrator will be able to supply you with the name of the printer that is suitable for the type of file you wish to print.

Windows

To print via the AXIS 540/640 from Windows 3.1, Windows for Workgroups, Windows 95 or Windows NT, proceed as follows:

1. Select Print... from the File menu within your application. If the printer you want to use is the default printer, just proceed with printing from your application as normal.
2. If the required printer is not selected as default, select the name of the required printer in the Print dialogue box; the name that was assigned during installation. The Network Administrator will supply you with the printer name.
3. Set up any of the parameters as needed, e.g. paper size, and then click OK.

You may now proceed with printing.

OS/2

To print via the AXIS 540/640 from an OS/2 workstation, proceed as follows:

1. Select Print... from the File menu within your application.
2. In the Print Document window, select the Queue name for the required printer. Your Network Administrator will supply you with the name.

You may now proceed with printing.

Macintosh

Open the Chooser window by selecting Chooser in the Apple menu. Follow these steps to choose a printer:

1. Click on the LaserWriter (or LaserWriter 8.0) Icon.
2. If your network has more than one zone, click the name of the default zone.
3. Click the name of the printer you want. Your Network Administrator will supply you with the printer name.
4. For LaserWriter 8.0 printer driver only:
Click Setup..., and then click Auto Setup. If the printer, just as the print server, supports bi-directional printing the installation will then be automatically performed. If not, you will be prompted to select a PPD file matching your printer, then click OK.
5. Click the close box. This completes the selection of a printer and you may now print from within applications as normal.
